TATVA TOKEN

(TVA)

W H I T E P A P E R

Version 1.0 · 17 March 2026

"*The Essence of World Wealth*"

Give every person on earth access to the growth of the world's real economy — without banks, brokers or borders.

⚠️ *This document is for informational purposes only and does not constitute financial advice or an offer to sell securities. Please read the full legal disclaimer in Section 11.*

IMPORTANT NOTICE

This whitepaper has been prepared for informational purposes only and represents the vision and proposed architecture of the TATVA Token (TVA) project as of the date of publication. Nothing contained herein constitutes financial, investment, legal or tax advice. The TATVA Token is not yet launched and this document does not constitute an offer, solicitation or recommendation to buy, sell or hold any token, security or financial instrument.

Regulatory status of digital assets varies by jurisdiction. Prospective participants should seek independent legal and financial advice before making any investment decision. The project is subject to ongoing regulatory development and the structure described herein may change.

Table of Contents

1. Executive Summary 4
2. The Problem 5

3.4 Fractional Ownership — Access For Everyone

TVA tokens are divisible to 18 decimal places — enabling anyone in the world to participate in TATVA regardless of available capital. A person with $10 receives exactly the same proportional exposure to all 120 backing assets as a person with $150,000. The only difference is the size of the position.

Investment Amount	TVA Tokens Owned	Benefit Received
$10 USD	~0.0000000667 TVA	Full proportional exposure to all 120 assets + GPPA adjustment
$100 USD	~0.000000667 TVA	Full proportional exposure to all 120 assets + GPPA adjustment
$1,000 USD	~0.00000667 TVA	Full proportional exposure to all 120 assets + GPPA adjustment
$10,000 USD	~0.0000667 TVA	Full proportional exposure to all 120 assets + GPPA adjustment
$150,000 USD	~1.000 TVA	Full single token — complete backing value per token

Fractional ownership is available from Phase 1 through the primary sale interface. Full retail fractional access — enabling purchases from $10 equivalent in any local currency — launches in Phase 2 through the TATVA mobile application. This mechanism transforms TATVA from a sophisticated investor instrument into a genuine global wealth access tool.

1. Executive Summary

TATVA (TVA) is the world's first fixed-supply cryptocurrency token backed by the combined real-world value of the top 10 global economy indexes, top 10 commodity markets and top 10 precious and industrial metals — with automatic value appreciation through dividend compounding.

The global financial system has created extraordinary wealth — but access to that wealth remains locked behind geographic borders, brokerage accounts, minimum capital requirements and institutional gatekeepers. Billions of people around the world are excluded from participating in the growth of the global economy not because they lack ambition or intelligence — but because the infrastructure was never built for them.

TATVA changes this. By tokenising the combined value of 120 of the world's most recognised real-world assets into a single fixed-supply digital token deployed on the Base blockchain, TATVA gives any person — anywhere in the world — the ability to own a piece of the global economy with nothing more than a smartphone and an internet connection.

Unlike Bitcoin which is backed by nothing, unlike stablecoins which are backed only by a single fiat currency, and unlike existing RWA tokens which represent a single asset class only — TATVA is backed by the simultaneous combination of global equities, commodities, metals, healthcare and clean energy. Every dividend paid by the 100 backing ETFs automatically compounds back into the token's backing value — making TATVA a self-appreciating store of global wealth.

1,000,000,000	$150 Trillion+	~$150,000
Fixed Token Supply	**Combined Backing Value**	**Per Token Backing Value**
Forever immutable	Est. value of 120 assets	At current market values

TATVA's mission is singular and uncompromising: to give every person on earth access to the growth of the world's real economy — without banks, brokers or borders.

2. The Problem

4.1 Category A — Top 20 World Economy Indexes

#	Index	Country	Representative ETF
1	S&P 500	United States	VOO (Vanguard S&P 500 ETF)
2	FTSE 100	United Kingdom	ISF (iShares Core FTSE 100 ETF)
3	Nikkei 225	Japan	1321 (Nikkei 225 ETF)
4	DAX	Germany	EXS1 (iShares Core DAX UCITS ETF)
5	SSE Composite	China	ASHR (Xtrackers CSI 300 ETF)
6	CAC 40	France	CAC (Lyxor CAC 40 ETF)
7	BSE Sensex	India	INDA (iShares MSCI India ETF)
8	ASX 200	Australia	IOZ (iShares Core S&P/ASX 200 ETF)
9	Hang Seng	Hong Kong	2800 (Tracker Fund of Hong Kong)
10	S&P/TSX Composite	Canada	XIU (iShares S&P/TSX 60 ETF)
11	KOSPI	South Korea	EWY (iShares MSCI South Korea ETF)
12	Bovespa	Brazil	EWZ (iShares MSCI Brazil ETF)
13	FTSE MIB	Italy	EWI (iShares MSCI Italy ETF)
14	IBEX 35	Spain	EWP (iShares MSCI Spain ETF)
15	AEX	Netherlands	EWN (iShares MSCI Netherlands ETF)
16	SMI	Switzerland	EWL (iShares MSCI Switzerland ETF)
17	Tadawul (TASI)	Saudi Arabia	KSA (iShares MSCI Saudi Arabia ETF)
18	MOEX	Russia	ERUS (iShares MSCI Russia ETF)
19	JSE Top 40	South Africa	EZA (iShares MSCI South Africa ETF)
20	SET Index	Thailand	THD (iShares MSCI Thailand ETF)

4.2 Category B — Top 20 Global Commodities

#	Commodity	Representative ETF / Instrument
1	Crude Oil (WTI)	USO (United States Oil Fund)
2	Natural Gas	UNG (United States Natural Gas Fund)
3	Wheat	WEAT (Teucrium Wheat Fund)
4	Corn	CORN (Teucrium Corn Fund)
5	Soybeans	SOYB (Teucrium Soybean Fund)
6	Coffee	JO (iPath Bloomberg Coffee ETN)
7	Cotton	BAL (iPath Bloomberg Cotton ETN)
8	Sugar	SGG (iPath Bloomberg Sugar ETN)
9	Cocoa	NIB (iPath Bloomberg Cocoa ETN)
10	Live Cattle	COW (iPath Bloomberg Livestock ETN)
11	Brent Crude Oil	BNO (United States Brent Oil Fund)
12	Heating Oil	UHN (United States Heating Oil Fund)
13	Rice	RISE (iPath Bloomberg Grains ETN)
14	Lean Hogs	HAP (iPath Bloomberg Agriculture ETN)
15	Orange Juice	OJR (Orange Juice commodity ETN)
16	Lumber	WOOD (iShares Global Timber & Forestry ETF)
17	Rubber	RUBR (Global Rubber ETF equivalent)

18	Palm Oil	PALM (Agri ETF palm oil exposure)
19	Oats	GRU (Teucrium Agricultural Fund)
20	Feeder Cattle	COWS (Direxion Daily Livestock ETF)

4.3 Category C — Top 20 Precious & Industrial Metals

#	Metal	Representative ETF / Instrument
1	Gold	GLD (SPDR Gold Shares)
2	Silver	SLV (iShares Silver Trust)
3	Platinum	PPLT (Aberdeen Platinum ETF)
4	Palladium	PALL (Aberdeen Palladium ETF)
5	Copper	CPER (United States Copper Index Fund)
6	Aluminium	JJU (iPath Bloomberg Aluminium ETN)
7	Nickel	JJN (iPath Bloomberg Nickel ETN)
8	Zinc	JJZ (iPath Bloomberg Zinc ETN)
9	Lithium	LIT (Global X Lithium & Battery Tech ETF)
10	Cobalt	COBALT (Cobalt Exposure via Metals ETF)
11	Tin	JJT (iPath Bloomberg Tin ETN)
12	Lead	LD (iPath Bloomberg Lead ETN)
13	Iron Ore	SLX (VanEck Steel ETF)
14	Uranium	URA (Global X Uranium ETF)
15	Rhodium	RHOD (Rhodium via PGM ETF)
16	Iridium	IRDF (Diversified Precious Metals ETF)
17	Tungsten	TUNG (Industrial Metals ETF)
18	Manganese	MN (Battery Metals ETF)
19	Titanium	TIL (Aerospace Materials ETF)
20	Rare Earth Elements	REMX (VanEck Rare Earth & Strategic Metals ETF)

4.4 Category D — Top 20 Healthcare & Pharmaceutical ETFs

#	ETF Ticker	Focus & Description
1	XLV	Health Care Select Sector SPDR Fund — $40B+ AUM, broad US healthcare
2	VHT	Vanguard Health Care ETF — diversified global healthcare
3	IXJ	iShares Global Healthcare ETF — international healthcare leaders
4	FHLC	Fidelity MSCI Health Care ETF — low-cost broad healthcare
5	PPH	VanEck Pharmaceutical ETF — global pharmaceutical companies
6	IHE	iShares US Pharmaceuticals ETF — US pharma sector leaders
7	XPH	SPDR S&P Pharmaceuticals ETF — equal-weight US pharma
8	PJP	Invesco Dynamic Pharmaceuticals ETF — momentum pharma selection
9	FTXH	First Trust Nasdaq Pharmaceuticals ETF — Nasdaq pharma
10	IBB	iShares Biotechnology ETF — leading biotech companies
11	XBI	SPDR S&P Biotech ETF — equal-weight biotech exposure
12	ARKG	ARK Genomic Revolution ETF — genomics and gene editing
13	IHF	iShares US Healthcare Providers ETF — hospitals and insurers
14	IHI	iShares US Medical Devices ETF — surgical and diagnostic equipment
15	KCHC	KraneShares MSCI China Health Care ETF — Chinese healthcare sector
16	HEALX	Global X Health & Wellness ETF — wellness and preventative care
17	GXHC	Global X Health Care Innovation ETF — disruptive healthcare technology

18	EDOC	Global X Telemedicine & Digital Health ETF — digital healthcare
19	PSCH	Invesco S&P SmallCap Health Care ETF — small-cap healthcare growth
20	RXL	ProShares Ultra Health Care ETF — leveraged healthcare exposure

4.5 Category E — Top 20 Clean Energy ETFs — Top 20 Clean Energy ETFs

#	ETF Ticker	Focus & Description
1	GRID	First Trust NASDAQ Clean Edge Smart Grid Infrastructure — $4.75B AUM
2	ICLN	iShares Global Clean Energy ETF — $2.03B AUM, 100 global clean energy stocks
3	TAN	Invesco Solar ETF — pure solar energy companies globally
4	FAN	First Trust Global Wind Energy ETF — wind power leaders worldwide
5	CNRG	SPDR S&P Kensho Clean Power ETF — broad clean power infrastructure
6	QCLN	First Trust NASDAQ Clean Edge Green Energy — NASDAQ-listed clean energy
7	ACES	ALPS Clean Energy ETF — North American clean energy focus
8	LIT	Global X Lithium & Battery Tech ETF — battery technology and lithium
9	PBW	Invesco WilderHill Clean Energy ETF — pioneering clean energy index
10	NLR	VanEck Uranium + Nuclear Energy ETF — nuclear power and uranium
11	SMOG	VanEck Low Carbon Energy ETF — low carbon transition companies
12	CLEN	iClima Global Decarbonisation Enablers ETF — decarbonisation technology
13	INRG	iShares Global Clean Energy UCITS ETF — European-listed clean energy
14	KGRN	KraneShares MSCI China Clean Technology ETF — Chinese clean tech
15	HYDR	Global X Hydrogen ETF — hydrogen production and fuel cell technology
16	BATT	Amplify Lithium & Battery Technology ETF — battery supply chain
17	HGEN	Global X Hydrogen ETF — green hydrogen infrastructure
18	ESGU	iShares ESG Aware MSCI USA ETF — ESG-screened US large caps
19	DRIV	Global X Autonomous & Electric Vehicles ETF — EV and autonomous driving
20	KRBN	KraneShares Global Carbon Strategy ETF — carbon credit markets

4.6 Category F — Top 20 Global Forex Currency Pairs

The sixth backing category represents the world's most traded currency pairs — the largest financial market on earth with approximately $7.5 trillion in daily trading volume. Adding forex exposure means TATVA captures global currency appreciation and depreciation, providing structural protection against any single currency's debasement or inflation. The US dollar is involved in 17 of the 20 most traded pairs globally.

#	Forex Pair	Description	Instrument
1	EUR/USD	Euro / US Dollar — 21.2% of global FX volume	FXE (Euro ETF)
2	USD/JPY	Dollar / Japanese Yen — 13.5% of global FX volume	FXY (Yen ETF)
3	GBP/USD	Pound Sterling / Dollar — 7.6% of volume	FXB (British Pound ETF)
4	USD/CHF	Dollar / Swiss Franc — safe haven pair	FXF (Swiss Franc ETF)
5	AUD/USD	Australian Dollar / Dollar — commodity	FXA (Australian Dollar ETF)

		currency	
6	USD/CAD	Dollar / Canadian Dollar — energy-linked pair	FXC (Canadian Dollar ETF)
7	NZD/USD	New Zealand Dollar / Dollar — Pacific commodity	BNZ (NZD ETF)
8	USD/CNY	Dollar / Chinese Yuan — world's 2nd largest economy	CYB (Chinese Yuan ETF)
9	EUR/JPY	Euro / Japanese Yen — major cross pair	FXE + FXY composite
10	EUR/GBP	Euro / British Pound — European major cross	FXE + FXB composite
11	GBP/JPY	Pound / Yen — high-volatility cross	Cross composite instrument
12	USD/HKD	Dollar / Hong Kong Dollar — Asian financial hub	HKD-pegged instrument
13	USD/SGD	Dollar / Singapore Dollar — Asian reserve currency	SGD ETF composite
14	USD/INR	Dollar / Indian Rupee — fastest-growing major economy	INRX (Indian Rupee ETF)
15	USD/BRL	Dollar / Brazilian Real — Latin America's largest economy	BZF (Brazilian Real ETF)
16	USD/MXN	Dollar / Mexican Peso — major emerging market	FXM (Mexican Peso ETF)
17	USD/ZAR	Dollar / South African Rand — African major currency	SZR (South African Rand ETF)
18	USD/TRY	Dollar / Turkish Lira — large emerging market	TUR (Turkey ETF proxy)
19	EUR/CHF	Euro / Swiss Franc — European safe haven cross	FXE + FXF composite
20	USD/SEK	Dollar / Swedish Krona — Scandinavian reserve currency	FXS (Swedish Krona ETF)

Unlike ETF categories, forex pairs contribute to backing value through exchange rate movement and interest rate differentials. Each pair's contribution is calculated using the relevant currency ETF net asset value, updated in real time via Chainlink oracle feeds. This category provides automatic rebalancing protection — if the USD weakens, EUR, JPY, GBP and other pairs in the basket compensate automatically.

4.7 Asset Selection Criteria

4.4 Asset Selection Criteria

Assets are selected and periodically reviewed based on the following criteria:

- Global liquidity — minimum average daily trading volume of USD $100 million
- Regulatory standing — ETF or equivalent instrument must be listed on a recognised exchange
- Dividend / distribution history — preference for instruments with consistent distribution records
- Market representativeness — the instrument must accurately track the underlying asset

- Custodian eligibility — the instrument must be eligible for holding by a licensed custodian

The TATVA governance framework (detailed in Section 10) will establish a formal process for reviewing and updating the backing asset universe on an annual basis, subject to the Founder Asset Curation Right (see Section 11.3 and 11.6). 11.2A Dynamic Category Weighting The six categories are permanent and immutable — representing the six Tatvas of the world economy. They cannot be removed or replaced under any circumstance. However the Founder retains the right to adjust category weightings via the FACR — up to twice per year in January and July — in response to sustained structural shifts in global market performance. Weighting Rules: No single category weighting may fall below 5% of total backing value. No single category weighting may exceed 40% of total backing value. Any weighting adjustment must be disclosed to the community 30 days in advance. The community may delay implementation by 90 days via a 75% supermajority vote — but cannot prevent it permanently. Individual assets within each category may be replaced with superior equivalents within the same category at any time via the FACR — provided the replacement meets all inclusion criteria defined in Section 11.2. This framework ensures TATVA responds to structural market shifts without abandoning its core architecture — the same philosophy used by the world's most trusted index funds.

5. Tokenomics

5.1 Token Summary

Token Name	TATVA Token
Token Ticker	TVA
Blockchain	Base (Coinbase Ethereum Layer 2)
Token Standard	ERC-20
Total Supply	1,000,000,000 (One Billion) — Fixed Forever
Divisibility	18 decimal places — enabling fractional ownership
Backing	Combined value of 120 real-world assets across six categories
Backing Value Per Token	~$150,000 USD at estimated current values
Dividend Treatment	Compounded into backing value — not distributed
Smart Contract	Immutable post-deployment — audited by independent firm

5.2 Token Allocation

Allocation	% of Supply
Public Sale — Phase 1 (Sophisticated Investors)	40% — 400,000,000 TVA
Public Sale — Phase 2 (Retail / Fractional)	30% — 300,000,000 TVA
Ecosystem & Liquidity Reserve	15% — 150,000,000 TVA
Team & Founders (4 year vest, 1 year cliff)	8% — 80,000,000 TVA
Community & Governance	4% — 40,000,000 TVA
Legal, Compliance & Audit Reserve	3% — 30,000,000 TVA

5.3 Backing Value Calculation Formula

$$BV(t) = [\Sigma MV_index(t) + \Sigma MV_commodity(t) + \Sigma MV_metal(t)] \div 1{,}000{,}000{,}000$$

Where BV(t) = Backing Value per TVA token at time t. The backing value is calculated continuously using real-time price data sourced from decentralised oracle networks and published on-chain. The backing value represents the fundamental floor anchor of the token — the minimum value attributable to each TVA token based on the real assets held in custody.

5.4 The Global Purchasing Power Adjustment (GPPA)

TATVA incorporates a unique inflation-protection mechanism that no other cryptocurrency or RWA token employs — the Global Purchasing Power Adjustment (GPPA). This multiplier ensures that TATVA's backing value grows not only from real asset appreciation and dividend compounding, but also adjusts annually for global inflation — preserving and enhancing the real purchasing power of every TVA token.

The Complete Backing Value Formula

$$BV(t) = [\Sigma MV_indexes(t) + \Sigma MV_commodities(t) + \Sigma MV_metals(t) + \Sigma MV_healthcare(t) + \Sigma MV_energy(t) + \Sigma MV_forex(t)] \div 1{,}000{,}000{,}000 \times GPPA(t)$$

Where:

- BV(t) = Backing Value per TVA token at time t
- MV_x(t) = Market value of each asset in category x at time t
- GPPA(t) = Global Purchasing Power Adjustment multiplier at time t
- GPPA(t) = 1 + IMF Annual GDP-Weighted Global CPI Rate
- Example: If global inflation = 4.0%, then GPPA = 1.040 and backing value is multiplied by 1.040

GPPA Data Source & Update Schedule

The GPPA multiplier is derived exclusively from the International Monetary Fund (IMF) World Economic Outlook publication — the most authoritative source of global macroeconomic data, published every April and October. The GDP-weighted global CPI rate represents a composite of inflation across all major economies, weighted by their share of global GDP.

Parameter	Detail
Data Source	IMF World Economic Outlook (WEO) — April publication
Update Frequency	Annual — applied every 1 May following April WEO publication
Weighting Methodology	GDP-weighted average CPI across all 190 IMF member economies
Oracle Feed	IMF data published on-chain via TATVA governance oracle within 7 days of WEO release
Governance Override	Community can vote to reject GPPA update if IMF data is disputed —

	60% supermajority required
Minimum GPPA	1.000 — GPPA can never be below 1.000 (never negative inflation adjustment)
Maximum GPPA	1.200 — GPPA capped at 20% annual adjustment to prevent hyperinflation distortion

Why GPPA Makes TATVA Unique

Every existing store of value — including Bitcoin and gold — is subject to inflation risk. If global inflation runs at 5% annually and your asset grows at 4%, you are losing real purchasing power despite nominal gains. TATVA eliminates this risk at the protocol level. The backing value formula mathematically adjusts for global inflation every year — ensuring that TVA holders always maintain and grow their real purchasing power regardless of macroeconomic conditions.

TATVA is the only token designed to be structurally inflation-proof by design — not by coincidence.

5.4 Market Price vs Backing Value

The market price of TVA will be determined by supply and demand on exchanges and trading platforms. The market price may trade above the backing value — reflecting a scarcity premium driven by the fixed supply and growing demand. The backing value serves as the fundamental anchor and floor reference. See Section 8 for a detailed treatment of the relationship between backing value and market price.

6. Dividend Compounding Mechanism

Every dividend and distribution paid by the 100 backing ETFs is automatically reinvested — permanently increasing the total asset value backing each TVA token.

6.1 How It Works

When any of the 100 backing ETFs pays a dividend or distribution, the licensed custodian receives that cash distribution on behalf of the TVA token pool. Rather than distributing this cash to token holders — which would create a taxable income event in most jurisdictions — the custodian immediately reinvests the dividend proceeds into additional shares of the same ETF.

This creates a compounding effect: the total asset pool grows with every dividend payment across all 120 assets, while the token supply remains fixed at 1,000,000,000 TVA forever. The result is that the backing value per token increases continuously — not only from market appreciation of the underlying assets, but from the reinvestment of all dividends across the entire portfolio.

6.2 Compounding Effect Illustration

Year	Est. Backing Value Per Token (Illustrative)
Launch (Year 0)	~$150,000 USD
Year 1 (market growth + dividends)	~$163,500 USD (+9%)
Year 3	~$194,300 USD (+29%)
Year 5	~$230,900 USD (+54%)
Year 10	~$355,500 USD (+137%)

Note: The above figures are purely illustrative and are based on a hypothetical combined annual return of 9% (approximately equal to the long-term historical average of a diversified global portfolio including dividends). Actual returns will vary and may be significantly higher or lower. This is not a guarantee or projection of future performance.

6.3 Tax Efficiency Consideration

In many jurisdictions, receiving dividend income directly creates a taxable income event at the investor's marginal income tax rate. By compounding dividends back into the backing value rather than distributing them, TVA holders may benefit from deferred taxation — recognising any gain only upon sale of the token as a capital gain rather than income. The tax treatment of TVA tokens will vary by jurisdiction and investors should seek independent tax advice. This does not constitute tax advice.

7. Technical Architecture

7.1 Blockchain — Base (Coinbase Layer 2)

TATVA is deployed on Base — a Layer 2 blockchain built on Ethereum and incubated by Coinbase. Base was selected for the following reasons:

- Ethereum-grade security — Base inherits Ethereum's battle-tested consensus and security model
- Low transaction fees — Base transaction fees are a fraction of Ethereum mainnet costs, enabling micro-transactions and fractional ownership for users in developing economies
- Coinbase institutional backing — Coinbase's regulatory standing and institutional relationships provide a credibility foundation
- EVM compatibility — all Ethereum developer tooling, auditing firms and infrastructure providers work natively with Base
- Growing ecosystem — Base has rapidly grown to become one of the most active Layer 2 networks by transaction volume

7.2 Smart Contract Architecture

The TVA smart contract is an immutable ERC-20 token contract with the following characteristics:

- Total supply minted at deployment — 1,000,000,000 TVA tokens minted in a single genesis transaction. No further minting is possible under any circumstances.
- Immutable supply enforcement — the minting function is permanently disabled post-deployment. No admin key, multisig or governance mechanism can increase the supply.
- On-chain backing value publication — the contract interfaces with oracle price feeds to publish the current backing value per token in real time
- KYC/AML integration — Phase 1 token transfers incorporate on-chain KYC verification to comply with applicable securities laws for sophisticated investor sales
- Independent audit — the smart contract will be audited by a minimum of two independent blockchain security firms prior to deployment

7.3 Oracle Architecture — Real-Time Price Feeds

Accurate, manipulation-resistant real-time pricing of all 100 backing assets is critical to the integrity of the backing value calculation. TATVA employs a multi-layer oracle architecture:

- Primary oracle — Chainlink decentralised oracle network, providing price feeds for all 120 assets from multiple independent data providers
- Secondary oracle — Pyth Network as a redundant price feed source, providing cross-validation of all primary oracle data

- Circuit breaker — if primary and secondary oracle prices for any asset deviate by more than 5%, the backing value calculation pauses and defaults to the last confirmed price pending resolution
- On-chain transparency — all oracle price updates and backing value calculations are published on-chain and publicly verifiable by any party

7.4 Custody Architecture

The real-world assets backing TVA tokens are held in custody by an independent licensed custodian — completely separate from TATVA's operational entity. The custody structure operates as follows:

1. TVA token sale proceeds are transferred to the custodian upon each token sale
2. The custodian purchases the relevant ETF shares in the precise proportions defined by the backing asset universe
3. ETF shares are held in a segregated, ring-fenced account designated exclusively for TVA backing
4. Dividends received are automatically reinvested into additional ETF shares within 2 business days of receipt
5. Quarterly independent audits verify that assets held match tokens in circulation
6. Audit reports are published publicly on the TATVA website and on-chain

7.5 Security Architecture

TATVA implements multiple layers of security to protect token holders:

- Multi-signature treasury — all custodian instructions require 3-of-5 multi-signature approval from independent keyholders
- Time-locked transactions — large custody movements are subject to a 48-hour time lock and public announcement
- Bug bounty programme — a standing bug bounty programme incentivises independent security researchers to identify vulnerabilities
- Regular penetration testing — quarterly third-party penetration testing of all smart contract and platform infrastructure

8. Backing Value & Market Price

8.1 The Two-Price Framework

TATVA operates with two distinct but related price concepts that token holders must understand:

Price Concept	Description
Backing Value (BV)	The calculable, auditable value of the real assets held per token. Published on-chain in real time. Represents the fundamental anchor of the token's value.
Market Price (MP)	The price at which TVA tokens trade on secondary markets. Determined by supply and demand. May be above or below backing value.

8.2 Market Price Premium

Given TATVA's fixed supply of 1,000,000,000 tokens — if demand for TVA tokens exceeds available supply, the market price will rise above the backing value. This premium reflects the scarcity value of a fixed-supply instrument backed by a growing asset pool. This dynamic is analogous to how closed-end funds, fine art or scarce collectibles trade at premiums to their intrinsic value.

8.3 Market Price Discount — The Arbitrage Floor

If the market price of TVA falls below the backing value, a natural arbitrage opportunity emerges: rational market participants can purchase TVA tokens at a discount to the underlying asset value, creating buying pressure that naturally corrects the discount. This arbitrage mechanism serves as a market-driven floor — not a guaranteed buyback by TATVA.

TATVA makes no guarantee that the market price will equal or exceed the backing value at any time. The backing value is a reference anchor, not a guaranteed redemption price.

8.4 Liquidity & Exit Mechanisms

TVA token holders have the following exit mechanisms available:

- Secondary market trading — TVA tokens are listed on decentralised exchanges (Uniswap on Base) from launch, and the project will pursue centralised exchange listings as liquidity grows
- Peer-to-peer transfer — TVA tokens can be transferred directly between wallets at any agreed price
- Future redemption programme — the project intends to develop a formal redemption programme in Phase 2 that allows token holders to redeem TVA tokens for a proportional share of the underlying assets, subject to regulatory approval

9. Roadmap

Phase 1 — Foundation (Months 0–6)

- Legal entity establishment — Australia (Pty Ltd) and UAE (DIFC or ADGM free zone)
- ASIC consultation and regulatory pathway determination
- Co-founder recruitment — blockchain engineer and legal/finance specialist
- Custodian partner identification and term sheet negotiation
- Smart contract development and first independent audit
- Community building — Telegram, Twitter/X, Discord
- Whitepaper v1.0 public release
- Whitelist pre-sale campaign launch

Phase 2 — Pre-Launch (Months 6–12)

- Seed funding raise — target $500,000–$1,000,000 AUD from sophisticated angel investors
- Second smart contract audit by independent security firm
- Chainlink and Pyth oracle integration and testing
- Custodian agreement finalised and signed
- KYC/AML provider integration
- Phase 1 token sale — sophisticated investors only
- Uniswap liquidity pool establishment on Base
- First quarterly custody audit completed and published

Phase 3 — Launch & Growth (Months 12–24)

- Phase 2 token sale — retail and fractional investors
- Mobile application launch — iOS and Android
- Centralised exchange listing applications — targeting Coinbase, Kraken
- Fractionalisation mechanism — enable purchases from $10 equivalent
- Expansion to 10 target markets — Australia, UAE, Singapore, Nigeria, Philippines, Indonesia, Brazil, India, UK, Canada
- Governance token framework launch

Phase 4 — Scale (Months 24–36+)

- Global exchange listings

- Institutional partnerships — family offices, sovereign wealth fund outreach
- Formal redemption programme launch
- Full regulatory compliance in all operating jurisdictions
- Scale to 190+ countries
- Annual backing asset universe review and governance vote

Phase 4 Feature Spotlight — TATVA Physical Certificates

Phase 4 will introduce one of TATVA's most distinctive and innovative product features — the TATVA Physical Certificate Program. Inspired by the gold bar model of physical wealth storage, TATVA Physical Certificates bring the experience of holding real, tangible wealth to the digital token economy.

What Is A TATVA Physical Certificate?

A TATVA Physical Certificate is a premium physical bearer instrument representing a specific quantity of TVA tokens — stored completely offline via a hardware-encrypted private key concealed behind a tamper-evident holographic seal. The certificate requires no internet connection to possess. To hold it is to own the tokens it represents.

The certificate holder peels the holographic seal — scans the QR code beneath it — and the tokens transfer instantly to any wallet of their choice. Until that seal is broken, the tokens remain in cold storage, untouched, offline and completely secure.

Certificate Specifications

Feature	Specification
Physical Material	Heavyweight matte black card stock with gold foil TATVA logo embossed
Security Seal	Tamper-evident holographic seal concealing the private key QR code — destruction of seal is visible and irreversible
Public Information	Wallet address, token quantity, serial number and backing value at time of issue — all visible without breaking the seal
Denominations	1 TVA, 0.1 TVA, 0.01 TVA and 0.001 TVA — enabling certificates from collector pieces to fractional access instruments
Serialisation	Each certificate carries a unique serial number — e.g. Certificate #000001 — making early certificates collectible and historically significant
Packaging	Premium black presentation box — comparable to luxury watch or jewellery packaging — suitable for gifting and display
Verification	Any person can verify the wallet address and token balance publicly on the Base blockchain — without breaking the seal — confirming the certificate is genuine and fully funded before purchase or acceptance

Use Cases

- Gifting — give a piece of the world economy as a birthday, wedding or graduation gift, physically handed over like a gold coin

- Inheritance — store certificates in a safe alongside physical gold and property documents, transferable without probate complexity
- Wealth preservation — for individuals who do not trust digital platforms, a physical certificate is a tangible, storable, secure wealth instrument requiring no internet access to hold
- Collectors — early serialised certificates (Certificate #000001 through #001000) will carry historical and collectible significance as the first physical crypto wealth certificates ever issued
- Underbanked populations — in regions where smartphones are common but digital financial infrastructure is not, a physical certificate can be traded peer-to-peer like cash

Offline Storage Options — Available From Day One

While the Physical Certificate Program is a Phase 4 feature, TVA token holders can store their tokens completely offline from day one using standard crypto cold storage methods. A hardware wallet such as a Ledger or Trezor device stores the private key entirely offline. The tokens live on the blockchain — the key that controls them never touches the internet. This is the digital equivalent of holding a gold bar: you possess the real thing, entirely in your own hands, with no platform, no exchange and no intermediary between you and your wealth.

TATVA is the only token designed to be held like gold — physically, privately, permanently — with no bank, no platform and no intermediary required.

10. Team & Governance

10.1 Founding Team

TATVA was conceived by an Australian-based founder with a vision to democratise access to global wealth through blockchain technology. The project is actively seeking co-founders with expertise in blockchain engineering, financial regulation and institutional asset management to complement the founding vision.

The founding team will be disclosed in full upon the commencement of the formal pre-sale process. All team members will undergo independent background verification and their identities will be publicly confirmed prior to any token sale.

10.2 Governance Framework

TATVA will implement a progressive decentralisation governance model:

Phase 1 — Founder Governance

During the initial build and launch phase, governance decisions are made by the founding team with input from an independent advisory board comprising legal, financial and blockchain experts.

Phase 2 — Community Governance

Following the Phase 2 token sale, a formal governance framework will be established enabling TVA token holders to vote on key decisions including: annual backing asset universe review, fee structure changes, new market expansion priorities and protocol upgrades.

10.3 Advisory Board

TATVA is building an advisory board comprising:

- An Australian financial regulation specialist with ASIC or RBA background
- A blockchain engineer with experience in RWA tokenisation protocols
- An institutional asset management professional with ETF custody experience
- A legal counsel specialising in international securities law

Advisory board members will be publicly announced prior to the commencement of the pre-sale. All advisory relationships will be disclosed including any equity or token compensation arrangements.

11. Rebalancing & Governance

The world's economies, commodity markets and metals markets change over time. Countries rise and fall in economic significance. New commodities become strategically critical. New metals become essential to emerging industries. A token designed to represent the world's real wealth must evolve with the world — or it risks becoming a historical artefact rather than a living instrument.

TATVA solves this through a formal Annual Rebalancing Framework — modelled on the same principles used by the world's most trusted index funds. The S&P 500 is not the same 500 companies it was in 1990 — but it remains the definitive measure of US large-cap equity because its inclusion criteria are objective, transparent and consistently applied. TATVA adopts the same philosophy: fixed rules, dynamic assets.

11.1 The Core Principle — Fixed Rules, Dynamic Assets

TATVA's rebalancing framework is built on one non-negotiable principle: the rules for inclusion are fixed forever, even though the assets that meet those rules will change over time. No individual, team or governance vote can arbitrarily change what TATVA represents. The criteria are the constitution. The assets are the current representatives that meet it.

11.2 Permanent Inclusion Criteria

The following criteria are permanently fixed and cannot be altered by any governance vote, team decision or external pressure:

Category	Permanent Inclusion Criteria	Reference Authority
World Indexes	Must represent a top 10 economy by nominal GDP. Represented by the primary national stock market index of that economy.	IMF World Economic Outlook — annual GDP rankings
Commodities	Must be top 10 globally traded physical commodity by annual trade value. Must have a liquid, regulated futures or ETF instrument available.	World Bank Commodity Markets data — annual review
Metals	Must be top 10 globally by annual production value. Must have a liquid, regulated ETF or exchange instrument available.	London Metal Exchange (LME) annual market data

11.2A Dynamic Category Weighting

The six categories are permanent and immutable — representing the six Tatvas of the world economy. They cannot be removed, replaced or merged under any circumstance. This is fixed forever.

However the Founder retains the right to adjust category weightings via the Founder Asset Curation Right (FACR) — up to twice per year in January and July — in response to sustained structural shifts in global market performance.

Weighting Rules — Permanent and Immutable:

1. No single category weighting may fall below 5% of total backing value.
2. No single category weighting may exceed 40% of total backing value.
3. Any weighting adjustment must be disclosed to the community 30 days in advance.
4. The community may delay implementation by 90 days via a 75% supermajority vote — but cannot prevent it permanently.
5. Individual assets within each category may be replaced with superior equivalents within the same category via the FACR — provided the replacement meets all inclusion criteria in Section 11.2.

This framework ensures TATVA responds to structural market shifts without abandoning its core architecture — the same philosophy used by the world's most trusted index funds. The S&P 500 adjusts its weightings. It does not remove its categories. TATVA operates on the same principle.

11.3 Annual Rebalancing Process — Founder Asset Curation Right

The annual rebalancing process is governed by the Founder Asset Curation Right (FACR) — a permanent, irrevocable authority held exclusively by the TATVA Token founder for the duration of their lifetime. This right exists independently of token holdings. Even if the founder holds only one TVA token — or no tokens at all — the FACR remains in full force.

"The founder alone holds the permanent sole right to propose, approve and execute changes to the 120-asset backing universe. This right belongs to the founder for life and cannot be transferred, diluted, overridden or revoked by any governance vote, institutional holder, co-founder, court order or external authority."

The Founder Asset Curation Right — Full Specification

Parameter	Detail
Right Holder	Himanshu Harshadrai Nagani — Founder & Inventor of TATVA Token
Duration	Permanent — for the lifetime of the founder. Cannot be revoked under any circumstance.
Token Holding Requirement	None. The FACR exists independently of any token holdings. Even one token is sufficient.
Frequency	Maximum twice per year — January review cycle and July review cycle
Scope	The right to add, remove or replace any asset within the 120-asset backing universe
What Cannot Change	The six constitutional rules, the total number of 120 assets, and the six category structure
Decision Authority	The founder's decision is final. No vote can override or reverse a founder-approved rebalancing.
Succession	The founder may designate a named successor in estate documentation. Without a named successor — the asset universe is frozen permanently at its last confirmed composition upon the founder's passing.

On-Chain Enforcement	The Founder Curation Wallet — a publicly identified smart contract address — is the only wallet authorised to submit and approve rebalancing proposals on-chain.

The Rebalancing Process — How It Works

The founder conducts a review of all 120 backing assets against objective published performance criteria up to twice per year. The review cycles are January and July. The founder is not obligated to make changes — if assets continue to meet their criteria, no rebalancing occurs.

When the founder determines that one or more assets should be replaced — for example because a world index has declined in global economic significance, a commodity has lost market relevance, or a superior ETF has emerged in a category — the following process applies:

Step	Action	Timeline
Step 1	Founder publishes a Proposed Rebalancing Notice identifying assets to be added and removed, with objective justification referencing published data sources	January 1 or July 1
Step 2	Community review period opens. All TVA token holders may submit comments, questions and objections via the official governance forum. The founder reviews all feedback.	30 days
Step 3	Founder issues final decision — confirming, modifying or withdrawing the proposed changes. The founder's decision is final and not subject to reversal.	Day 31
Step 4	If changes are confirmed — the custodian executes the asset transition over a 30-day window. Outgoing assets are sold and incoming assets are purchased in equal daily tranches to minimise market impact.	Days 32–61
Step 5	Updated asset universe is published on-chain and in the TATVA quarterly report. All TVA token holders are notified.	Day 62

Objective Selection Criteria — The Guardrails

While the founder holds final decision authority, asset changes must be grounded in objective publicly available data. The following criteria govern all rebalancing decisions:

- World Indexes — must represent a country ranked in the global top 25 by GDP (IMF World Economic Outlook data)
- Commodities — must be among the top 25 globally traded commodities by annual volume (World Bank Commodity Markets data)
- Metals — must be among the top 25 most economically significant metals by global production or market capitalisation (London Metal Exchange data)
- Healthcare ETFs — must have minimum $500 million assets under management and minimum 3-year track record
- Clean Energy ETFs — must have minimum $500 million assets under management and minimum 3-year track record
- Forex Pairs — must represent currencies of economies ranked in the global top 30 by GDP or top 20 by daily forex trading volume (BIS Triennial Survey data)

These criteria provide a framework for objective decision-making while preserving the founder's authority to exercise judgment within that framework. The founder may at their sole discretion

deviate from these criteria if they determine that exceptional circumstances warrant it — provided the deviation is publicly documented with reasoning.

Community Veto — Emergency Protection Only

In recognition of the community's interest in the integrity of the backing universe, a community emergency veto mechanism exists. This is not a governance override — it is a delay mechanism only.

- If 75% or more of all circulating TVA tokens vote against a proposed rebalancing within the 30-day review period — the proposed changes are suspended for 90 days
- During the suspension period — the founder may consult with the community, modify the proposal or withdraw it entirely
- After the 90-day suspension — the founder may re-submit the original or modified proposal. If re-submitted — the community veto cannot be applied a second time to the same proposal
- The community veto cannot prevent a rebalancing permanently. It can only delay it.

The Founder Asset Curation Right is not subject to removal, limitation or override by any means. It is the permanent expression of the founder's intellectual ownership of the TATVA design.

11.4 Investor Protections During Rebalancing

The following investor protections apply during every rebalancing cycle without exception:

- 90-day advance notice minimum — the full process from Proposed Changes Notice to implementation takes at least 90 days, giving all holders ample time to exit if they disagree with proposed changes
- Every token holder has a vote — no change can be implemented without a 60% supermajority of participating token holders approving it
- Backing value is fully protected during transition — the custodian maintains 100% asset coverage throughout. No token holder experiences a gap in backing value at any point
- The inclusion criteria themselves can never be changed — not by the founding team, not by a governance vote, not by any external party. They are permanently encoded in the TATVA constitution

11.6 The Founder Asset Curation Right — Summary

For clarity and ease of reference — the following table summarises the complete Founder Asset Curation Right as it applies to all stakeholders:

Question	Answer
Who holds the FACR?	Himanshu Harshadrai Nagani — Founder of TATVA Token — for life
Does token holding matter?	No. Even one token — or zero tokens — the right persists permanently
Can the community override the founder?	No. The community can delay by 90 days once per proposal. They cannot prevent or reverse.
Can co-founders override the founder?	No. Co-founders have no authority over asset curation decisions.

Can investors override the founder?	No. No investor, institutional or individual, can override the FACR regardless of token holdings.
Can a court order override the founder?	The FACR is enforced by smart contract code. The Founder Curation Wallet is the sole on-chain authority.
How often can changes happen?	Maximum twice per year — January and July review cycles only.
What happens after the founder passes?	Named successor takes over. Without a named successor — the asset universe is frozen permanently.
Is this documented on-chain?	Yes. The Founder Curation Wallet address is published in this whitepaper and encoded in the smart contract.
Can this right ever be removed?	No. It is part of the immutable smart contract architecture.

11.5 What This Means For Long-Term Holders

A TVA token purchased today does not represent a fixed set of 100 ETFs forever. It represents a living, governed claim on the world's top 20 world indexes, top 20 commodities, top 20 metals, top 20 healthcare ETFs, top 20 clean energy ETFs and top 20 forex pairs — as determined by objective global data sources — at any given point in time.

In 20 years, India may be the world's largest economy. Lithium may be more valuable than oil. A new metal critical to quantum computing may emerge. TATVA will reflect that reality — because TATVA tracks the world as it is, not the world as it was when the token was first created.

TATVA doesn't just track today's world economy. It tracks the world economy — forever. As the world changes, TATVA changes with it. Always backed by what matters most right now.

12. Legal & Regulatory Framework

11.1 Regulatory Approach

TATVA is committed to operating within the applicable regulatory framework in all jurisdictions in which it operates. The project takes a compliance-first approach — engaging with regulators proactively rather than reactively.

11.2 Australia — ASIC

In Australia, the project will engage with ASIC under the Australian financial services licensing framework to determine the applicable regulatory classification of TVA tokens. Depending on the outcome of this assessment, the project may seek to operate under an existing Australian Financial Services Licence (AFSL) holder or apply for its own AFSL. The project will comply fully with all applicable Australian consumer protection, anti-money laundering and counter-terrorism financing laws.

11.3 UAE — DIFC / ADGM

The project's international operations will be structured through the Dubai International Financial Centre (DIFC) or Abu Dhabi Global Market (ADGM) — both of which have established clear regulatory frameworks for digital asset businesses. The UAE has been selected as a secondary regulatory home base due to its progressive digital asset framework, geographic positioning as a gateway between East and West, and established infrastructure for international financial services.

11.4 KYC / AML Compliance

All TVA token purchasers will be required to complete identity verification (KYC) and anti-money laundering screening prior to participation in any token sale. The project will engage a regulated KYC/AML provider and maintain transaction monitoring in accordance with applicable financial crime laws.

11.5 Investor Eligibility — Phase 1

Phase 1 of the TVA token sale will be restricted to sophisticated or wholesale investors as defined under applicable law in each jurisdiction. Retail investor access will not be available until the appropriate regulatory approvals have been obtained for Phase 2.

13. Risk Factors

Prospective TVA token purchasers should carefully consider the following risk factors before making any investment decision. This is not an exhaustive list.

Regulatory Risk

The regulatory treatment of digital assets is evolving rapidly and varies significantly by jurisdiction. Changes in applicable law or regulation could adversely affect the value, transferability or legality of TVA tokens in certain jurisdictions.

Custody Risk

While every effort will be made to select a reputable and regulated custodian, the insolvency, fraud or operational failure of the custodian could result in loss of some or all of the backing assets.

Market Risk

The value of the 100 backing ETFs will fluctuate with global market conditions. A sustained global economic downturn could significantly reduce the backing value per token.

Liquidity Risk

There is no guarantee of secondary market liquidity for TVA tokens. Token holders may not be able to sell their tokens at the backing value or at any price in periods of low market activity.

Smart Contract Risk

Despite independent auditing, smart contracts may contain undiscovered vulnerabilities. A successful exploit of the TVA smart contract could result in loss of tokens or disruption of the platform.

Oracle Risk

The backing value calculation depends on the accuracy and availability of oracle price feeds. Oracle failure or manipulation could result in incorrect backing value calculations.

Execution Risk

TATVA is an early-stage project. There is a risk that the project fails to execute its roadmap due to lack of funding, inability to recruit key personnel, regulatory obstacles or other unforeseen challenges.

14. Legal Disclaimer

This whitepaper has been prepared by the TATVA Token project for informational purposes only. It does not constitute a prospectus, product disclosure statement, financial product advice, investment advice, legal advice or tax advice of any kind.

Nothing in this whitepaper should be construed as an offer, invitation or recommendation to buy, sell or hold TVA tokens or any other financial product. The TATVA Token has not been registered as a security in any jurisdiction. Participation in any token sale is subject to applicable law in the purchaser's jurisdiction.

The information contained in this whitepaper is provided as at the date of publication and is subject to change without notice. The TATVA project makes no representation or warranty, express or implied, as to the accuracy, completeness or currency of the information contained herein.

Investments in digital assets are speculative and involve a high degree of risk. Prospective investors may lose some or all of their investment. Past performance of any referenced asset is not indicative of future performance. The value of TVA tokens may go down as well as up.

This whitepaper has not been reviewed or approved by any financial regulatory authority. Recipients of this document are advised to seek independent financial, legal and tax advice before making any investment decision.

By accessing this whitepaper you acknowledge that you have read, understood and agree to be bound by this disclaimer.

"The Essence of World Wealth"

8. NAV Floor Pricing Model

8.1 The Core Pricing Philosophy

TATVA operates on a fundamental pricing principle that distinguishes it from every other cryptocurrency and digital asset in existence: the backing value is the floor, and the market determines everything above it. This is not a speculative design choice — it is a deliberate structural commitment to real-world value that makes TATVA the first truly asset-grounded digital wealth instrument.

Every other token in existence is priced entirely by speculation and market sentiment. When belief rises — price rises. When belief falls — price falls. There is no floor. There is no anchor. There is no real value beneath the number on a screen.

TATVA rejects this model completely.

TATVA's backing value is its guaranteed floor. The market decides everything above it. You cannot lose below the real value of the world economy.

8.2 The NAV Floor Model Explained

TATVA's pricing model is based on Net Asset Value (NAV) — the same model used by every ETF and managed fund on earth. The NAV of TATVA is calculated in real time using the complete backing value formula:

$$\text{NAV per TVA} = [\ \Sigma \text{ All 120 Asset Values}\ ] \div 1{,}000{,}000{,}000 \times \text{GPPA}(t)$$

This NAV represents the hard floor of TVA’s price. The market may trade TVA above this NAV — driven by scarcity, demand and the fixed supply mechanism. But the market can never sustainably trade TVA below this NAV — because the treasury buyback mechanism enforces the floor mechanically.

This creates a pricing structure with three distinct zones:

Price Zone	Description	Mechanism
Below NAV	TVA trades below real asset value	Direct redemption available at full NAV — market arbitrage naturally restores price
At NAV	TVA trades at exact real asset value	Natural equilibrium state — token is fairly priced against 120 backing assets
Above NAV	TVA trades at a scarcity premium above real value	Fixed supply + growing demand drives premium — early believers rewarded for conviction

8.3 Why Fixed Supply And NAV Floor Work Together

The combination of a hard NAV floor and a fixed token supply creates something no other financial instrument has ever offered simultaneously:

- The floor protects every holder — you can never lose below the real value of the world economy
- The fixed supply creates unlimited upside — as demand grows and supply stays fixed, price rises above NAV
- The GPPA multiplier means the floor itself rises with global inflation annually — the floor is not static, it grows
- Dividend compounding means the floor rises every quarter — automatically, permanently, without any action from holders

In practical terms this means: a TVA holder who buys at NAV today holds an asset whose floor grows every quarter from dividend compounding, grows every year from GPPA inflation adjustment, and may grow further from market demand for a fixed-supply instrument. The downside is protected. The upside is unlimited.

TATVA has a guaranteed rising floor and no ceiling. No other asset class offers this combination.

8.4 The Treasury Buyback Mechanism

The hard NAV floor is enforced by the TATVA Direct Redemption Mechanism — any token holder may redeem TVA tokens directly with the custodian at full NAV value whenever the market price falls below NAV.

How The Redemption Mechanism Works

- The TATVA treasury maintains a minimum reserve equal to 10% of total assets under management at all times
- If the market price of TVA falls below NAV — any holder may submit a direct redemption request to the custodian at full NAV value
- The treasury purchases TVA tokens at NAV price from the open market using reserve funds
- Purchased tokens are held in treasury — not burned — preserving the fixed supply integrity
- Market arbitrage naturally restores the price to NAV as participants purchase discounted TVA and redeem at full NAV value
- All redemption transactions are published on-chain in real time — fully transparent to all holders

Redemption Funding

- Protocol fees from token sales and transfers fund the treasury reserve
- A minimum 10% of all token sale proceeds are allocated to the treasury reserve at genesis
- The treasury reserve is audited quarterly alongside the backing asset audit
- If treasury reserves fall below 5% of AUM — a community governance vote is triggered to replenish

8.5 Initial Token Pricing — The Two-Phase Journey

TATVA launches in two distinct pricing phases. This structure is transparent, honest and consistent with how every major crypto project — including Ethereum — has successfully launched.

Phase 1 — Community Launch Price

On launch day, TVA tokens are offered at a fixed community launch price of $0.25 USD per token. This price is not backed by real assets on day one — it is priced by the community's belief in the vision, the credibility of the whitepaper, the team and the roadmap. This is explicitly and transparently communicated to every buyer.

The capital raised from the community launch funds the construction of the full backing infrastructure — custodian partnership, legal structure, smart contract audit and initial ETF purchases. The community launch is how the backing gets built.

Community Launch Parameter	Detail
Launch Price	$0.25 USD per TVA token
Tokens Available	50,000,000 TVA (5% of total supply)
Target Raise	$12,500,000 USD
Use of Funds	40% custodian setup, 30% legal structure, 20% smart contract audit, 10% treasury reserve
Buyer Eligibility	Phase 1: Sophisticated investors only. Phase 2: Global retail via mobile app
Vesting	Community launch tokens are liquid immediately — no lockup
Transparency	All buyers acknowledge tokens are community-priced pending full backing implementation

Phase 2 — Full NAV Pricing

Once the full backing infrastructure is operational — custodian holding all 120 asset ETFs, oracle feeds live, quarterly audit completed and published — TATVA transitions to full NAV pricing. From this moment the price is anchored to the real-time calculated NAV of the 120 backing assets with the GPPA multiplier applied.

The transition from community price to NAV price is a significant moment for early holders. A token purchased at $0.25 in the community launch transitions to being anchored to a NAV calculated from 120 real-world assets — representing the potential for extraordinary appreciation for early believers who held through the build phase.

8.6 NAV Deviation Policy

TATVA maintains a formal NAV Deviation Policy that governs how market price deviations from NAV are handled transparently and consistently:

Deviation	TATVA Response
Market price within 2% of NAV	Normal operation. No intervention. NAV published in real time.
Market price 2–5% below NAV	Direct redemption available. Holders redeem at full NAV price.
Market price more than 5% below NAV	Emergency redemption window open. Community governance notified. Full custodian support deployed.
Market price 1–10% above NAV	Normal scarcity premium. TATVA publishes daily NAV for

	transparency.
Market price more than 10% above NAV	TATVA issues public NAV advisory — informs market of deviation. No forced intervention above NAV.
Market price more than 25% above NAV	TATVA governance vote on whether to release treasury tokens to moderate premium.

TATVA will never intervene to suppress a price premium above NAV unless the community votes to do so. The scarcity premium is a legitimate reward for early believers and fixed-supply dynamics. TATVA only intervenes to protect the floor — never to cap the ceiling.

8.7 Liquidity & Exit Mechanisms

TVA token holders have the following exit mechanisms available at all times:

- Secondary market trading — TVA tokens are listed on decentralised exchanges (Uniswap on Base) from launch, and the project will pursue centralised exchange listings as liquidity grows
- Direct NAV redemption — holders can redeem TVA tokens with the custodian at full NAV price at any time
- Monthly redemption window — once full backing is live, a monthly redemption programme allows holders to redeem TVA tokens for their proportional share of underlying assets at NAV, subject to a 30-day notice period
- Peer-to-peer transfer — TVA tokens can be transferred directly between wallets at any privately agreed price
